

| Rank | Project | Synopsis | Country |
|------|-------------------------|---|---------|
| 1 | EduLab | The company is specialized in creating and developing educational CD's that cover the Science material (Maths, Physics, Chemistry, Biology, and IT) of the Lebanese Curriculum in middle and high school classes of private/public and Anglophone/Francophone schools. These CD's give students real time laboratory experiments through visual simulations. | Lebanon |
| 2 | Batroun Biofuel Company | The company will consider the conversion of used cooking oil and other vegetable oils into Biodiesel fuel. This Biodiesel, in turn, will be used to operate industrial power plants, vehicles, as well as to power agriculture machinery and heavy equipment. The company's main target clients are located in the EU countries where incentives to encourage the usage of green fuels are strongly applied, in contrary to Lebanon. | Lebanon |
| 3 | Hatifou | The company will provide Voice over Internet Protocol (VoIP) termination services to its clients. VoIP reduces the cost of international phone calls by delivering them through the internet to call terminators in the country of destination. The company relies on this termination business model, hence it will be responsible for taking voice traffic off the IP network (internet) and terminating it over conventional telephony networks i.e. landline networks (PSTN) and mobile phone networks (GSM). | Algeria |
